# ITMD 441/541

Lab 4 – Sample IIFE Working

Sample Requirements

- Change the name "Stellar Marketing" which is in the navbar (top left) to **Demo ITMD541**.
- Change the Image of Sports team which is in "Specialized Marketing Solution" section.
- Change the H1 heading "Elevate Your Brand with Stellar Marketing" to **"This is a demo heading".**

Solution

Below are the steps using which you can fulfill the sample requirements. This will demonstrate how IIFE works and how you can test your IIFE.
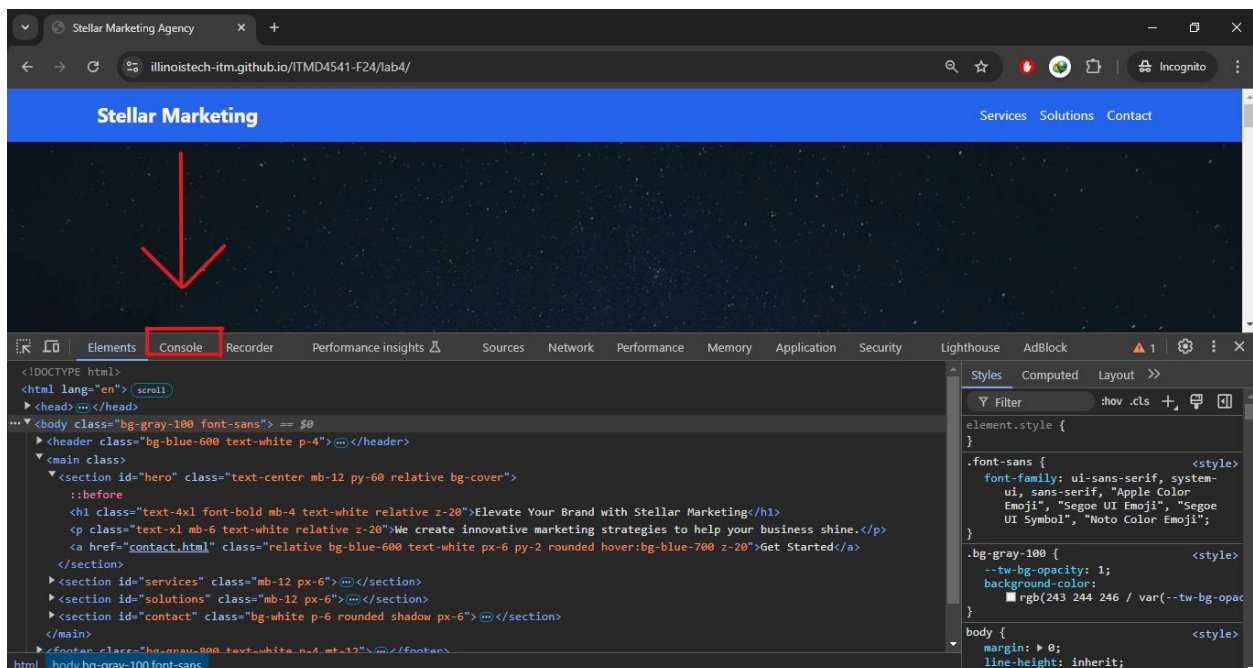

Step 1- Open the original website into a new tab (incognito preferred).
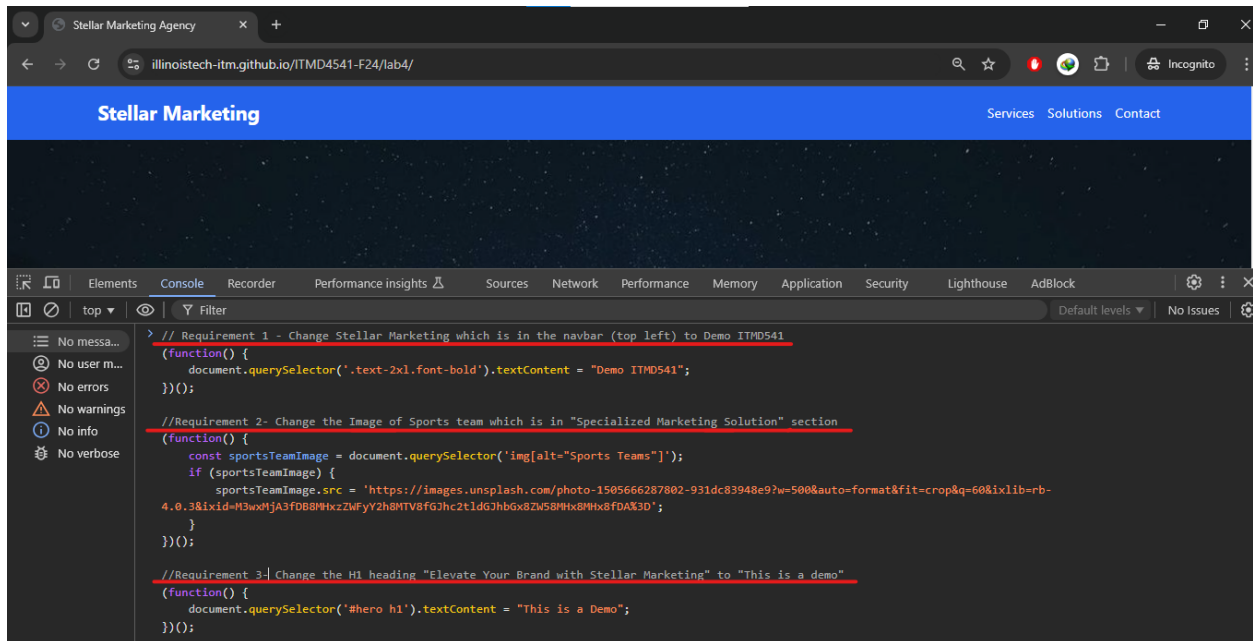

Step 2- Right Click on the window and scroll down till you find **Inspect**, then click on it. OR press **CTRL+SHIFT+C** (on windows) or **COMMAND+SHIFT+C** (for mac).

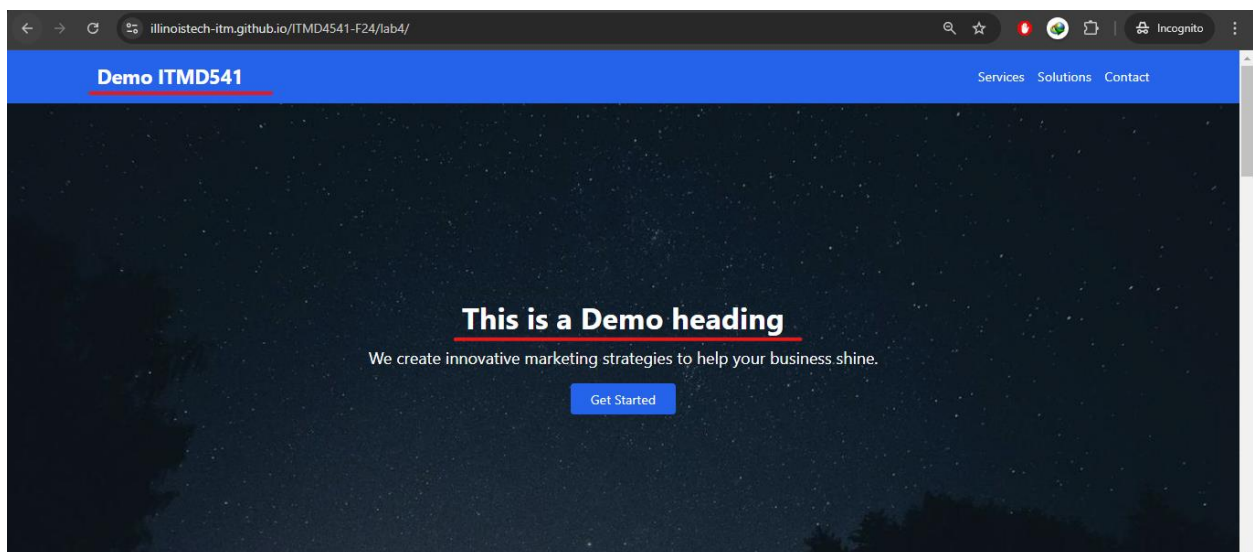

Step 3 – After Clicking Inspect, developer tool will open on the bottom of the window or on the right side of the window. Click on **Console** tab. (Console tab is where you will run your JS code and test your IIFE).
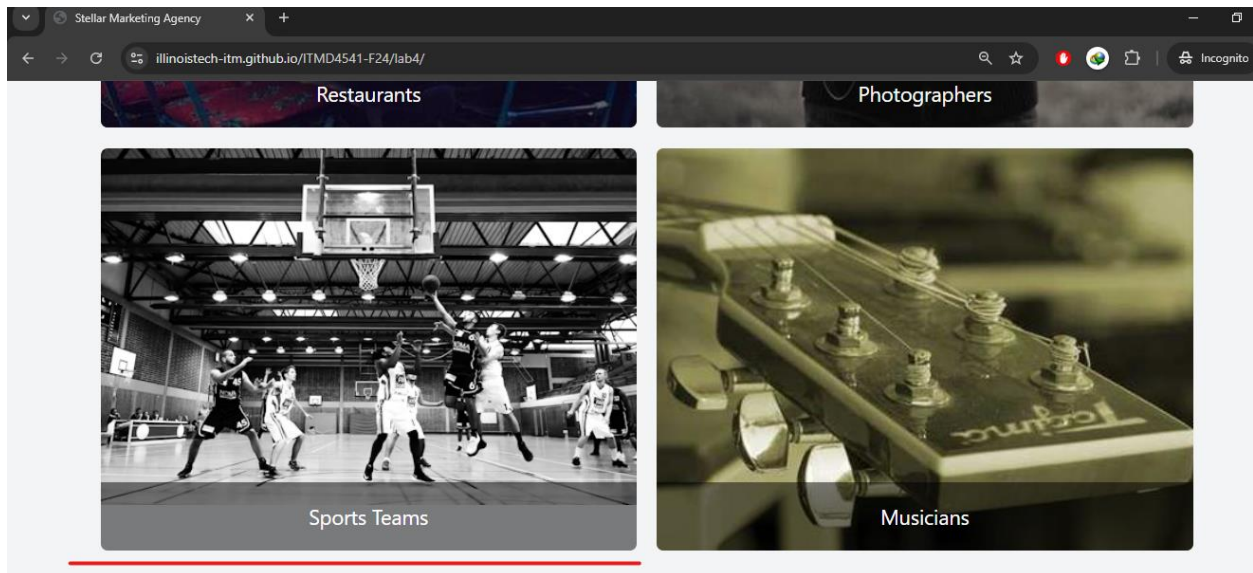

Step 4 – After the console tab is open, press **CTRL+L** to clear the console if there are any garbage present. Now, **copy your entire JS code** (IIFE code written to fulfill the above requirements) and **paste in the console** and **hit enter.**

Step 5 – Voila !! Your IIFE has run correctly and made the changes. Verify the changes. You'll be able to see on the DOM.

Make sure you test your IIFE multiple times, and it applies all the changes correctly. You should expect us to copy what is in your file, paste it in the browser console, run it and see the output.

Here is the LINK for the demonstration video.

If you have any questions regarding the assignment, you can join TA hours meet to clarify your doubts.
